  "performance"
)
```

```
df <- df %>%
  filter(id != "SR08")
```

Restructuring Data for Plotting

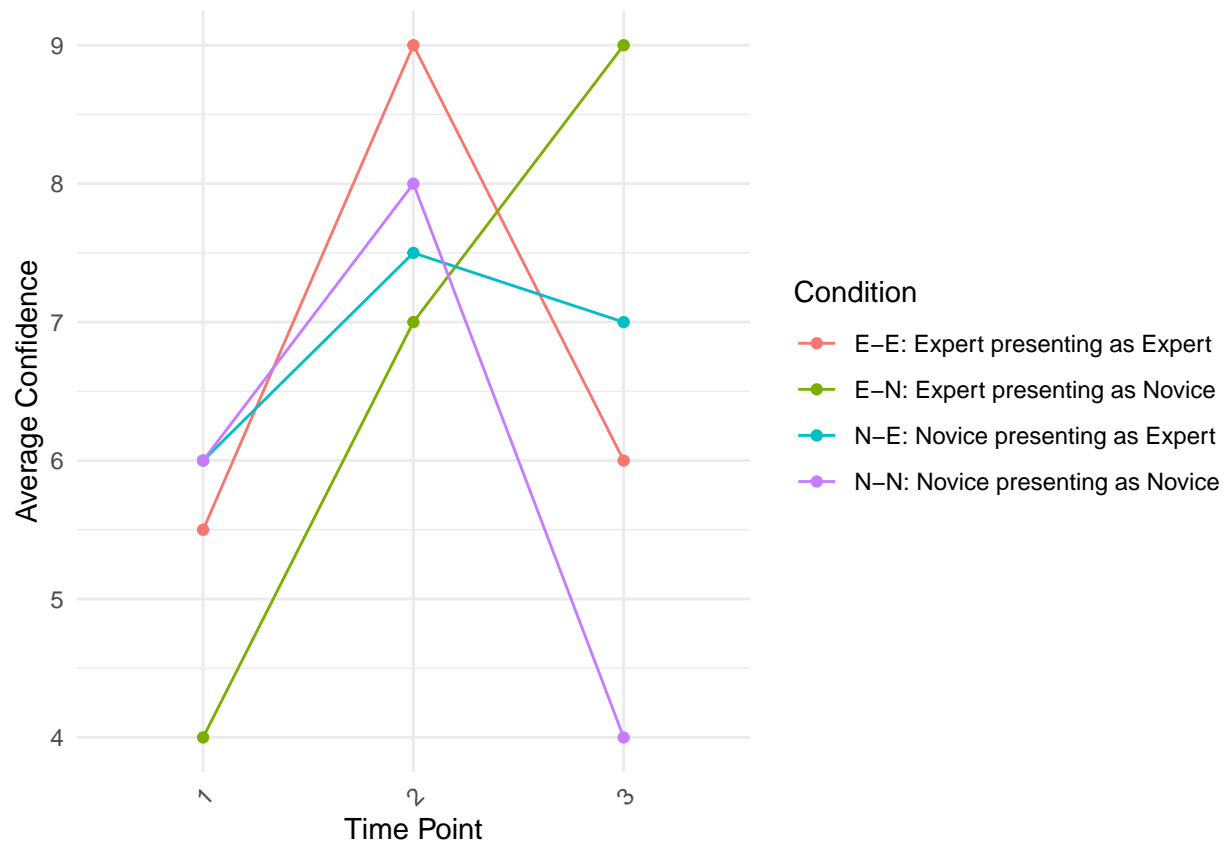

```
df_long <- df %>%
  pivot_longer(
    cols = starts_with(c("1_", "2_", "3_")),
    names_to = c("time", "metric"),
    names_pattern = "(\\d)_(.*)",
    values_to = "score"
  )

df_summary <- df_long %>%
  group_by(condition, time, metric) %>%
  summarise(
    mean = mean(score, na.rm = TRUE),
    se = sd(score, na.rm = TRUE) / sqrt(n())
  )
```

Plotting Self-Assessments over Time

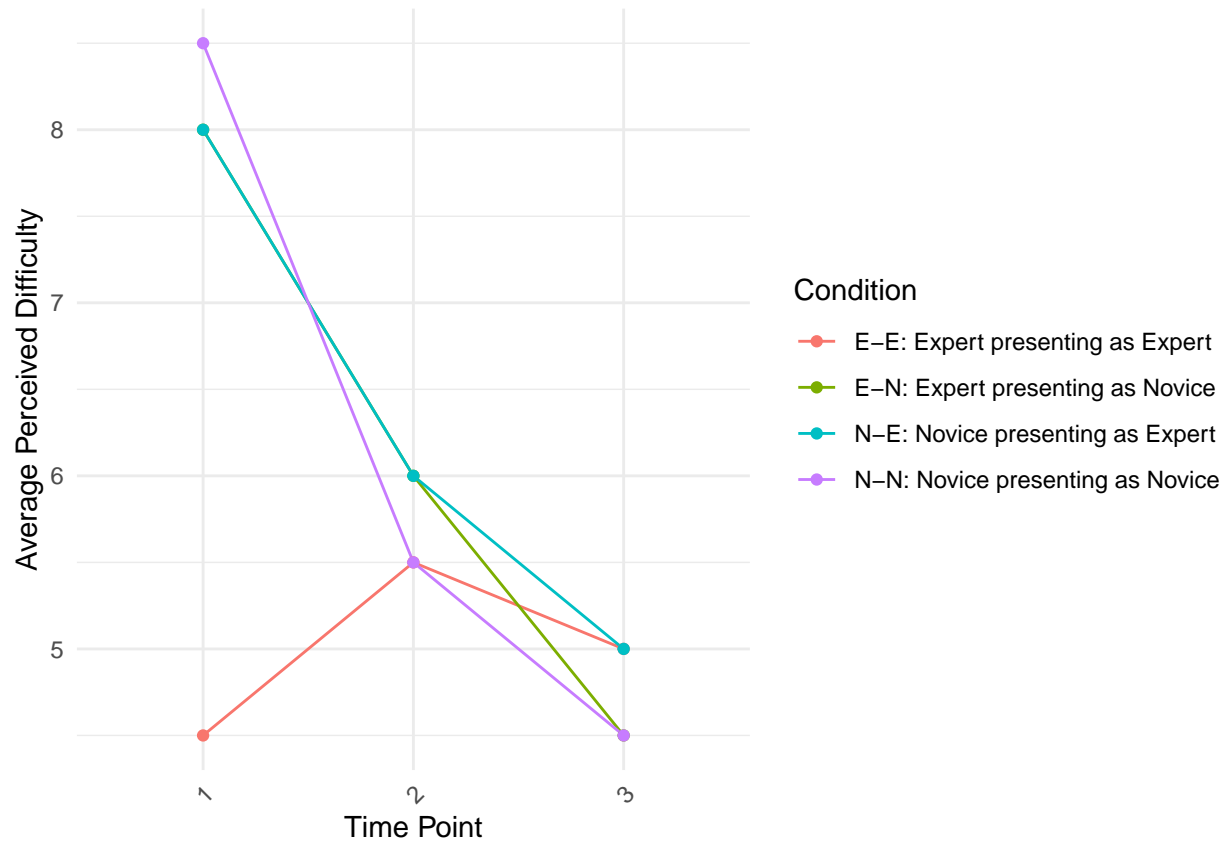

```
# confidence plot
plot_confidence <- ggplot(df_summary %>% filter(metric == "confidence"), aes(x = time, y = mean, color = condition)) +
  geom_line() +
  geom_point() +
  # geom_errorbar(aes(ymin = mean - se, ymax = mean + se), width = 0.2) + ## nicer to have when condition is not confidence
  labs(x = "Time Point", y = "Average Confidence", color = "Condition") +
  theme_minimal() +
  # facet_wrap(~condition) + # to have 4 separate graphs
  theme(axis.text.x = element_text(angle = 45, hjust = 1))

plot_confidence
```

```
# difficulty plot
plot_difficulty <- ggplot(df_summary %>% filter(metric == "difficulty"), aes(x = time, y = mean, color = Condition)) +
  geom_line() +
  geom_point() +
  # geom_errorbar(aes(ymin = mean - se, ymax = mean + se), width = 0.2) + ## nicer to have when condition is not expert
  labs(x = "Time Point", y = "Average Perceived Difficulty", color = "Condition") +
  theme_minimal() +
  # facet_wrap(~condition) + # to have 4 separate graphs
  theme(axis.text.x = element_text(angle = 45, hjust = 1))

plot_difficulty
```

Friedman Test (Non-Parametric ANOVA)

```
# Friedman Test for Confidence
friedman_confidence <- friedman.test(
  score ~ time | id,
  data = df_long %>% filter(metric == "confidence")
)

# Friedman Test for Difficulty
friedman_difficulty <- friedman.test(
  score ~ time | id,
  data = df_long %>% filter(metric == "difficulty")
)

# Results!
#friedman_confidence
#friedman_difficulty

(where Group 1 = first time point, Group 2 = second time point, Group 3 = third time point)

- For confidence, a significant difference was found between groups 1 and 2 ($p = 0.033$). No other pairwise differences were significant.
- For difficulty, a significant difference was found between groups 1 and 3 ($p = 0.046$). No other pairwise differences were significant.
